Similarly, any prior art of record does not teach or suggest alone or in combination with other prior art of record the specific features called for in the claims, particularly the independent claim 19

requires, among other limitations, "searching in the database the stored hash values for which holds that the reliable bits of the applied hash value match the corresponding bits of the stored hash value while ignoring unreliable bits of the applied hash value and corresponding bits of the stored hash value; for each stored hash value found in response to the searching: selecting in the database the corresponding series of stored hash values; calculating the bit error rate between the reliable bits of the series of hash values representing the unidentified information signal and the corresponding bits of the selected series of hash values in the database while ignoring unreliable bits of the series of hash values and corresponding bits of the selected series of hash values in the database; and determining for which series of stored hash values the bit error rate is minimal; and returning an identification of the respective one of the plurality of information signals that corresponds to the minimal bit error rate."
